

THE MAINE CAMPUS

Vol. XI

BANGOR, MAINE, JANUARY 18, 1910

No. 14

THE WAR FOR INDEPENDENCE.

Professor Colvin took for the general subject of her fourth lecture last Wednesday, the period in South American history covered by the events leading up to, and resulting from, the wars for independence, as well as the wars themselves. The lecture was subdivided into four heads as follows: the interest that other nations had in South America and the narrow escape of the latter from foreign domination; the situation in Europe at that time; the actual struggle for independence; and the question of recognition of the new republics by other powers. An abstract of the lecture is given below.

The nations of Europe had a very great interest in affairs in South America. In the case of France this interest became manifest very early, not only as a result of trade but also as a result of war. Havana, Cartagena, and Santiago were sacked and looted by French expeditions during the colonial period. For some time the English exercised with the exception of Spain, the predominating influence in the affairs of the Spanish colonies. The voyage of Drake around the Horn and up the west coast of South America, showed to England the immense possibilities of these regions. The capture of Jamaica gave England a base from which to operate. A vast trade sprang up between the English and the colonists which soon caused a feeling of jealousy in Spain. War between Spain and England began in 1739 and lasted until 1748. This war caused the discontinuation of the annual fair at Porto Bello where most of the trading with the colonists was done. The commerce for the west coast from the time of this war on went round the Horn instead of following the old route across the Isthmus of Panama. England tried at one time to get a foothold on the Isthmus but the effort was unsuccessful. At the close of the French and Indian War an agreement was made whereby Spain exchanged Florida for Havana, the importance

of the latter two not being appreciated by the English at the time.

At the time of the beginning of the South American struggle for independence the situation in Europe was very complex. The overthrow of the French throne by the Revolution had separated France from Spain. The princes who had occupied the two thrones were both members of the Bourbon house. After Louis XVI was dethroned, the party in power in France had little sympathy with Spain, and war between the two countries soon resulted. During the course of these European wars the territory of Louisiana changed hands several times, England in particular being anxious to possess it, and the final result was the purchase of the territory by the United States. While these European wars were in progress England had several excellent chances to gain a strong foothold in South America, but the situation at home was so grave that she was unable to take advantage of these opportunities.

About 1609 Napoleon took possession of the Spanish crown, overthrew the reigning prince, and set his brother Joseph on the Spanish throne. This act resulted in peace between France and Spain as long as Joseph held rule. From the year 1808 to 1813, Joseph attempted to govern the American colonies by means of decrees. Juntas, or committees, formed by members of the party supporting the deposed monarch, also sent decrees to the colonies, and the result was contradictory orders and endless confusion in South America as long as this practice lasted. The colonists were not certain as to whom they were supposed to take their orders from, but throughout the period they remained loyal to the house of Bourbon. In consequence of these conditions the control of the affairs in the colonies was left largely to the colonists themselves, for the first time in their history. Ferdinand soon got possession of the Spanish crown, overthrew the constitution then in existence and made

attempts to regain control of South American affairs.

The wars leading to the independence of the colonies of Spain in South America were long and bloody and were marked by great brutality on both sides. Before the year 1808 England and France were more interested in affairs in South America than was the United States. The efforts leading toward freedom were started by three men, Miranda, who was the first agitator, Bolivar, who was the northern leader, and San Martin, who led the south. Miranda was born in Caracas about the middle of the eighteenth century, fought with the French in the American Revolution, and was acquainted with many of the early leaders in the United States, such as Washington, Adams, and Hamilton.

Because of the Spanish system of colonial government it was very hard to get all the colonies to act together in the matter of revolt. The cities were isolated and each one had a tendency to act for itself in the struggle. The struggle is divided into two distinct periods, that before 1817 and the period after that year. Before 1817 the revolt was everywhere unsuccessful and was marked by guerrilla fighting of the worst type. Argentina was the single exception. There San Martin organized an efficient body of troops which he drilled in the mountains. In 1816 Bolivar and Miranda were overthrown, Miranda dying as a result, but Bolivar was allowed to go to Jamaica, whence he soon returned and took up the struggle again.

About 1817 San Martin led his force across the Andes into Chile and the freeing of that country was quickly accomplished by the aid of his trained troops. The war was now carried northward into Peru, and in 1821, Lima was captured with the aid of Admiral Cochrane, a former officer of the English navy. Peru was the most loyal of the Colonies and for a long time held out against the Revolutionists. A meeting between San Martin and Bolivar was arranged in which San Martin turned over his command to Bolivar and returned to private life. The liberation of Venezuela and Columbia soon resulted, followed shortly by that of Ecuador and northern Peru. Spain made renewed attempts to regain control of her colonies

but they were quite unsuccessful and she finally had to acknowledge their independence.

TIME OF JUNIOR WEEK.

The Faculty have voted favorably on the petition of the juniors to be allowed to have Junior Week immediately preceeding Commencement.

They do not propose to make the custom permanent but, after having discussed the matter thoroughly with the University Council and the members of the senior class, they have decided to allow the experiment to be tried this year only.

The plan has several very good features to recommend it. The problem of Commencement Week has always been one which has caused a great deal of anxiety to those who have had it in charge. Coming as it does after the examinations are all over, the number of underclassmen who remain for the final festivities is usually very small and the campus becomes a comparatively lonely place. This of course, deters many of the alumni from returning to the University to attend the Commencement exercises. The combining of the two occasions into one, thus making a week of festivity, instead of two or three days at an interval of only two or possibly three weeks.

Again, at the time when the Junior Week exercises are usually held, the classes are just beginning the review of the work of the semester preparatory to the final examinations. Naturally very little studying is done during that time. By the new plan no time will be lost from college work and the time thus gained will be made up for by setting the date of the examinations three days earlier than usual.

Then the last, but by no means least, advantage of this plan is the fact that better weather conditions will be obtained. In former years, the exercises which were scheduled for out-of-doors were always extremely uncertain. By the first week in June the weather is sure to be more settled, the campus will be in the height of its beauty, and the occasion made more enjoyable in every way because of the more pleasing environment.

MAINE, 81; DEXTER H. S., 8.

In its second practice game of the season Saturday evening, the Maine basketball team showed much improvement in speed and team work and defeated the visiting team from Dexter High School, 81 to 8.

Maine started off at a fast clip and scored half its baskets in the first period, Scales and Nason throwing the most with eight and seven respectively. In the second half the team eased up a little, and yet Nason and Marshall scored goals almost at will. As the score mounted up into the seventies the spectators wondered if Maine would reach the century mark but the time was too short and they had to be satisfied with 81 points, the largest score Maine has run up in several years.

The game was clean throughout, although in the first half Maine played fast. The Dexter team was unable to keep the ball in their possession for very long at a time and much of the playing was around its own basket. The dribbling and passing of Captain Marshall was exceptionally good and Scales and Nason shot baskets almost as fast as they could come within range.

The line-up and summary was as follows:

MAINE	DEXTER
Scales, r. f.....	l. f., Dearborn
Nason, l. f.....	r. f., Brown
Washburn, Parker, c.....	c., Bailey
Marshall, r. b.....	l. b., Spenser
Swasey, Lemaire, l. f.....	r. b., Colbath
Goals from floor, Nason, 13, Scales, '12, Marshall 10, Washburn 5, Brown 2, Dearborn, 1, Goals from fouls, Scales 1, Dearborn 3. Referee, Stuart, '10. Time of halves, 20 minutes.	

RECEPTION BY PROF. AND MRS. GRAY.

A very pretty and enjoyable reception was given Saturday evening by Prof. and Mrs. Gray in honor of Miss Marshall Saunders, the authoress, and her sister Miss Grace Saunders, of Halifax, Nova Scotia. Ice Cream was served by Mrs. McKee and Miss Comstock poured coffee. The function was attended by many of the Faculty and a few of the students.

BASKETBALL.

John Neary of Natick, Mass., has been re-engaged to coach the basketball team this year, and arrived on the campus the first of this week.

In the meantime Captain Marshall is working hard to develop the material at hand into a fast and strong team. The following men are showing up well; Scales, '11, Morrison, '10, and Merrill, '11, forwards; Washburn, '12, Parker, '12, centers; Swasey, '13, Clark, '12, Marshall, '11, and Nason, '11, guards.

It is necessary that more good men should come out at once, if Maine is to make a good showing on the Massachusetts trip. This is the hardest trip of the kind that the basketball team has ever taken. On February 22, it will meet New Hampshire S. C. at Durham, and the following night, Tufts at Medford. This is sure to be a hard game, but the team gets no rest after it, meeting an equally strong team at Rhode Island College at Kingston on the 24th. The next night they play Worcester Polytechnic Institute at Worcester, winding up the trip with Massachusetts Tech on the 26th.

"A PAIR OF BLINDERS."

The Dramatic Club will commence rehearsals immediately after the examinations are over, and it is desired that all wishing to try for the cast will report at the first rehearsal, the date of which will be announced later. The play to be produced this year is a three-act comedy, entitled "A Pair of Blinders." There are eleven characters in the play, of which nine are male and two are female. The rehearsals will be in charge of Professor Daggett who has successfully coached the Club for the last three years.

The schedule has not been completed yet but about twelve or fifteen performances are being arranged.

Within the past eleven years, the burning of six fraternity houses at Cornell has aggregated a financial loss of \$340,997.33, and in two of the fires eight lives were lost.

Matter.

Terms: \$2.00 per year, on or before Nov. 1st; single
copies 10 cents.

All business communications should be addressed to
the Business Manager.

Back numbers will be furnished all those desiring
them upon application to the Manager.

Contributions from undergraduates and alumni are
earnestly solicited. They should be addressed to the
Managing Editor.

BANGOR CO-OPERATIVE PRINTING COMPANY

EDITORIALS.

WITH the real beginning and opening of track
work a call for candidates is always
made. Real earnest track work has been going
on in the gymnasium since recess and a fair
number of men have reported to the coach and
captain. The number, however, is less than one-
half what it should be, which makes it necessary

for Captain Fortier and Manager Sumner to issue
the annual call.

It seems too bad that such an action must be
taken in a large institution like Maine. Besides
the fact that his college spirit should govern
every man here, track work itself must appeal
to a large majority of fellows for various reasons.
It is a form of exercise which is healthy, body
building, useful and satisfying, and a person
cannot but gain, who indulges in it. It is not a
sport which must be practiced at a certain time,
for a student may use a spare hour or half hour at
any time during the day when he is at leisure.
The opportunity of being shown the proper way
to run, jump or vault by a man of experience is
not to be pushed aside without thought. Every
man who turns out for track puts himself some-
what in the limelight of University activities by
becoming better known and acquainted among
his college mates. Above all, Maine needs track
men this year and the call should be responded
to enthusiastically.

This spirit should be shown by all four classes.
This spring is the last chance the seniors will
have to do something as undergraduates for their
Alma Mater and the freshmen are just beginning
to get into affairs. Many a track star entered
here undeveloped and without the knowledge
that he had any ability in that line. Coach
Schildmiller has sent word to the football men
that they must get out for track work this spring.
The classes and fraternities can do a great deal
by influencing their members to report to Coach
Mills.

There are six big track events this spring, the
Boston A. A. meet in February, the indoor meet
in March, the outdoor class meet, the dual meet
with Technology and the state meet in May, and
the New England meet in June. These will give to
many a grand opportunity for winning the
coveted M or the class numerals. A good show-

EXECUTIVE COMMITTEE OF ATHLETIC ASSOCIATION.

At the regular meeting of the Executive Committee of the Athletic Association, held last Tuesday evening, in the Library, Clide G. Morrill, '12, of Wakefield, Mass., and Philip R. Hussey, '12, of Patten, Maine, were elected assistant managers of football for the coming year. The election for assistant managers of baseball was put over until next month, when the matter will probably be taken up. The report of the sub-committee on basketball that former coach Neary of Natick, Mass., had been hired for the present year, was accepted together with the report of the sub-committee on track, who reported the securing of coach Mills for the track department.

DR. SHELDON VESPER SPEAKER.

The Sunday vesper address of Jan. 9, was delivered by Rev. Charles M. Sheldon, D. D., of Topeka, Kan. One of the largest congregations that has gathered in the chapel for some time greeted Dr. Sheldon.

The special musical features for the occasion were an organ prelude, Batiste's Offertory in D minor, by Prof. Thompson, and Woodward's, "The Radiant Morn Hath Passed Away," sung by the senior class quartet composed of George E. Springer, first tenor; James M. Eaton, second tenor; Harold M. Royal, first base; and Malcolm E. Fassett, second bass.

Dr. Sheldon in his talk to the students gave to them the basis of a true education, making its fundamental components, humility, the quest of the truth, and love for all mankind.

No education can be called a true one without the quality of humility, for after all there is never an end to an education while a man lives. Therefore the man who pompously draws himself up and proclaims to the world what he has learned in his few short years, has not the true education, but the one who in true humility lives from day to day endeavoring to learn from every man, something which he himself does not know, goes on year after year approaching the true education.

Dr. Sheldon made it very emphatic that the love for all mankind must predominate the life of all who would endeavor to gain a real education. The ability with which one meets the millionaire at his desk and the other man in the street and calls them both by the name brother is the test for an educated man. The thought carried further, disperses the generally conceded idea of getting out of the world everything that you possibly can, but rather makes the truest Christian the man who puts the most into the world.

Prof. Comstock has been recently giving a series of free lectures and demonstrations before the W. C. T. U. of Skowhegan.

Prof. W. A. Brown attended the New England Poultry Show at Boston recently. He took with him several kinds of birds for an exhibit.

THESES.

Most of the seniors who have theses to prepare have selected their subjects and they are now hard at work on them, on some a group of several men being engaged. A partial list of the subjects follows and shows well the magnitude of some of these practical tasks undertaken by the engineers and agricultural, forestry and chemistry students

Department of electrical engineering:

V. R. Chadbourne and H. M. Royal—The investigation of high frequency and high tension leakage.

Frank Barron, A. L. Adams, and E. L. Snow—The investigation and construction of a wireless telegraph station.

C. A. Mayo and K. R. Fox (chemistry)—The continuation of the investigation of the production of ozone electrically.

I. M. Stover—The investigation and design of a lighting system for the town of Orono.

F. R. Bigney, C. F. Smith, and A. B. Chandler—Test of a high voltage power station.

R. W. Crocker and G. P. Goodrich—Calculations for a power transmission plant and the detailed distribution of lighting and motors.

J. M. Eaton and C. E. Stickney—A test of a steam electrical plant.

E. S. Alton and R. E. Hobbs—A test of a gasoline engine lighting set.

C. A. Hall and A. S. Moore—An investigation of the power equipment for a high speed inter-urban railway system.

R. W. Gould—An investigation of pulp mill machinery and motors required for the same.

W. E. Congdon—An investigation of the power at the Veazie station.

J. L. Collins—An investigation of water power development.

E. R. Berry—An investigation of railway signal systems.

H. W. Kyes—An investigation of a high temperature electrical furnace.

Department of Mechanical engineering:

R. T. Cole—Tests of lubricants.

G. S. Cummings—Construction of a gas producer.

H. N. Danforth and F. E. Merriam—The designs of a four-cylinder gas engine.

G. K. Jordan—A study of the conservation of heat.

P. H. Littlefield—The design of a steam fire-engine.

C. A. Johnson—Test of gasoline carburetors.

Forestry department:

W. H. Wentworth, L. W. Gardner, R. B. Cruickshank, F. D. Davis, M. E. Reed, and W. C. Bagg—Valuation and topographical survey of the eastern part of Orono township.

Department of civil engineering:

H. W. Wright—Railroad conduction on the Bangor and Aroostook R. R.

H. D. Leary, E. S. Russell, J. S. Rose, and H. E. Walker—Proposed hydraulic improvements.

A. E. Oak, W. S. Merrill, and C. A. Porter—Hydraulic development on the Piscataquis.

M. E. Fassett, L. M. Bragg, H. L. Clifford and P. D. Simonton (electrical)—Reinforced concrete beam test.

A. E. Libby and A. A. Winters—Test of cement.

J. N. Philbrook, C. H. Tucker, and W. B. Baylies—Bridge design.

W. M. Hicks and C. J. Gooch—Proposed spur track to heating plant.

V. R. Ray, C. O. Pratt, H. P. Bruce and C. M. Fulton—Grade-crossing applications.

A. L. Maddox and C. C. Ketchum—Development of water power on the Aroostook river.

H. V. Jordan—An investigation of rainfall in Maine.

College of Agriculture:

A. K. Gardner and G. S. Wadsworth—Practicability of packing Maine Baldwin apples in boxes under present conditions.

H. P. Sweetser—Practicability of western methods of orcharding in Maine.

G. A. Stewart—Skeletons of sheep.

Department of chemistry.

R. J. Bird—Asphaltic binders for road materials

A. K. Burke—The preparation of cyanamides.

R. O. Hatch—Sulphite red liquor.

R. A. Jellison—Paint materials.

R. P. Littlefield—The alkylation of metallic cyanimides.

R. P. Norton—Filter paper from woodpulp.

J. S. Scales—An oil from the white spruce.

LECTURE BY PROF. CHASE.

Prof. Chase entertained a very interested company of the Literati at the Library last Tuesday evening with a talk on coin-collecting and numismatics, in which he is well-versed. This was only one of the enjoyable and profitable meetings which have been held and are to be held this year.

In part, Prof. Chase said: Everybody has his hobby, or should have—something in which he is interested for its own sake—something from which he derives mental or physical benefit. Some hobbies are harmful; others are expensive. The collector's hobby may easily be made expensive, but often, with good judgment it becomes actually a source of profit.

Coin collecting involves the study of coins, in fact, the collecting is a mere incident in numismatics.

The designs on our own coins are featureless and afford comparatively little for study. In spite of that fact there are thousands of enthusiastic collectors of American coins who study the minutest difference of type, date, etc. A book has been written on the varieties of the copper cent of 1794.

The provinces of Canada have struck over 1000 varieties of coins, mostly in copper, many of which are interesting to study. In Spanish America there are many local and proclamation pieces, besides the regular coinage. The coins of the Colonial period of the United States are most original in design. The Pine tree shilling, the elephant of North Carolina, the ploughshare of New Jersey, the "Mind your business" cent of Benjamin Franklin are forms.

The coinage of the Old World is endless. In England there are series from Roman times covering a long list of periods—British, Roman, Saxon, Norman, The Plantagenets, Tudors, Stuarts. On the continent there are 100 forms in Netherlands alone which struck coins; in North Germany there are 350, and in other parts of Europe the conditions are similar.

Some cities have perished so completely that we know of them only from their coins which have been found. Coins give us portraits of the

world's greatest rulers such as Caesar, Pompey, Cleopatra, Marcus Aurelius, Henry VIII., Cromwell, Napoleon, Frederick the Great, Peter the Great, Oom Paul Kruger, Boliva and George Washington.

Coins perpetuate the degree of civilization of a people, its past and present history, its achievements in government and art, its needs and its faiths, its ideas and its ideals. They are the petrified embodiment of its outward and inner life. They are first hand records, monuments beyond which we can not and need not go.

MINSTREL SHOW, FEB. 18.

M. F. McCarthy, '11, manager of the baseball team, who has charge of the preparation for the minstrel show to be given February 18, in the Bangor City Hall, states that the rehearsals are progressing very satisfactorily. Mrs. R. K. Jones is conducting the rehearsals and has an enthusiastic chorus of 50 men to work with.

This show is a new thing on the program of winter entertainments at the University and it promises to be very successful. Only the one performance in Bangor will be given and the proceeds will be used to buy coats for the baseball team.

SOPHOMORE HOP APRIL 15.

At a meeting of the sophomore class last week the committee for the Hop recommended the date of April 15 for the dance and it was adopted.

The class also elected W. E. Parker as its representative on the University Council and chose for its executive committee A. E. Crabtree, F. L. Darrell, C. S. Morrill, H. F. Crosby and L. W. Smiley.

MEETING MAINE INTERCOLLEGIATE ATHLETIC ASSOCIATION.

Prof. R. K. Jones, Hon. L. C. Southard, '75, and C. C. Johnson, '10, will act as Maine's representatives at the meeting of the Maine Intercollegiate Athletic Association, to be held in Boston on Feb. 12. In the evening they will attend the B. A. A. meet.

MECHANICAL AND ELECTRICAL SOCIETY.

At a recent business meeting of the Mechanical and Electrical Club the members discussed the feasibility of entering the National Mechanical and Electrical Society and thus establishing a branch organization here. Professors Ganong and Jewett addressed the meeting in regard to this project and endeavored to point out the benefits of such an action.

If it is decided to enter this society the students will be enabled in both the mechanical and electrical departments to receive one of the most prominent engineering periodicals. In addition the society sends out some of the best speakers obtainable on technical subjects which will give the students contact with men who have made their mark along engineering lines. Such a national organization has a strong influence throughout the country and its members are practically sure of obtaining positions on graduating from college.

The prospect of making a visit to Massachusetts was discussed and Bigney, '10, King, '11, and Chapman, '11, were appointed a committee to look up data in regard to the proposed trip. The executive committee was elected and the following are to serve: Eaton, '11, Doore, '11, and Gerrish, '11. They will have power to act as a nominating committee and will bring in candidates for the various other offices and committees.

Y. M. C. A.

At the business meeting of the Christian Association on Wednesday evening several new members were voted in. It was decided that all tickets should be dated the first of the month in which the holder is elected a member of the Association.

The music committee was authorized to take charge of the piano and to use such methods as it deemed advisable to keep the instrument in good condition.

The committee on the Rochester Convention was instructed to audit the expense accounts of the delegates and to reimburse the delegates to within five dollars of their necessary expenses.

Professor Simmons was the speaker at the Thursday afternoon meeting and took for his subject "The Stalwart Man." He said in part:

There is bound to be a time in every one of our lives when we must call into play all of our reserve force in order to meet some emergency, or cope with some situation in which we find ourselves. It is the training for this crucial moment which makes us stalwart men. Only constant training and effort will accomplish this end.

A stalwart man must have an intensive purpose. He must be patient and persevering, stern or gentle, as the occasion may require, and not afraid of the criticism of his enemies. He must stand behind what he believes to be right and, at the same time be honest enough to admit it when he finds that he is in the wrong. He must have an alert mind, and tact and judgment to use it correctly. And, finally if he is to be of the highest type of man he must have that faith in God which will enable him to meet defeat and even death with the same spirit and trustfulness which sustained Paul when he was about to die.

THE ASSEMBLY COMMITTEE.

The first meeting of the Assembly Committee was held last week and W. C. Bagg, '10, of Utica, N. Y., was chosen chairman. The delegates from the student body were as follows: V. R. Ray, '10, M. E. Reed, '10, E. S. Russell, '10, F. E. Fortier, '10, A. E. Libby, '10, W. B. Baylies, '10, J. M. Eaton, '10, V. R. Chadbourne, '10, W. H. Wentworth, '10, G. S. Wadsworth, '10, C. L. Lycette, '11, and R. R. Henderson, '11.

At a later meeting the committee decided to have two assemblies, the usual number, one in February and one in March.

The mechanical engineering department has recently installed in the machine shop two new engine lathes, which were made by Fay and Scott of Dexter, and it has ordered a surface condenser for use with the Corliss engine.

J. E. Church, '13, of Gardiner, Me., has recently been pledged to Delta Tau Delta.

Harry F. has recently had his father celebrate his birthday in Biddeford.

Edward Journal is a stalwart man. He has a manufacturing connection with his paper, calling the natural a factoring p. Mr. Bland.

ALUMNI NOTES.

'76.

Harry F. Hamilton, whose home is in Boston, has recently had the pleasure of helping his father celebrate his 91st birthday at his old home in Biddeford, Me.

Edward M. Blanding, editor of the Industrial Journal is one of Bangor's best known business men. He has been actively identified with the manufacturing interest of the state through his connection with the Bangor Board of Trade and his paper, and he has been no small factor in calling the attention of the outside world to the natural advantages of this State for manufacturing purposes, as well as for a summer resort. Mr. Blanding has been ever active with his pen.

'82.

Thos. W. Hine and Mrs. Hine (nee Clara L. Buck, '81) of Eureka, Cal., are now on an extended visit East and are visiting Mrs. Hine's sister, Mrs. W. N. Heald of Orono. Mr. Hine was a prominent member of his class. He went West soon after graduating and he has had experience in many lines of work. He followed the law for a while and became a judge in Arizona. He then was engaged in banking for a while and finally took up the lumber business in Eureka, Cal., where he is now doing well. Mrs. Hine is well known around Orono and the vicinity, Stillwater being her native home.

The following is a letter from G. L. Freeman, '03, who is chief draughtsman in the office of Sawyer and Moulton, consulting and designing engineers at 120 Exchange street, Portland. It is such a letter as THE CAMPUS management is always delighted to receive, even though it does contain a "knock", and it has bits of humor which will be appreciated by the acquaintances of the persons mentioned.

MANAGER CAMPUS:

DEAR SIR:—I enclose check for \$2.00 in payment of bill as rendered for subscription to THE CAMPUS. I haven't seen any of the copies as yet, but still wcn't kick about the bill. Kindly correct my address to 59 Brighton Avenue, Woodfords, Me.

W. L. Emerson, '09, is making good as draftsman and designer in this office. Oh, yes, and H. V. (Shine) Sheehan, '03, is working for the Androscoggin Reservoir Co. at Magalloway, on the big storage dam. Has responsible charge of work and keeps six pigs. It is rumored that the Company paid for the pigs. "Shine" keeps them in a Company shanty, built by the Company's labor, feeds them on Company swill and is figuring on selling them back to the Company in due season. To those who were nearer and dearer to "Shine" at Maine this will be interesting news.

Arad Barrows, '07, is Superintendent in charge on the Magalloway job. Both Sheehan and Barrows may be addressed at Wilson's Mills, Maine, before the winter closes in, and after then it won't be any use to try to reach them.

Yours truly,

G. L. FREEMAN, '03.

59 Brighton Ave.

Woodfords, Me.

'06.

Mr. Thomas M. Finlan of Van Buren, Me., and Miss Marion Kelliher of Orono, were married in Orono on Jan. 3rd. Mr. Finlin is proprietor of a drug store in Van Buren.

'09.

William Randall was recently a visitor on the campus. Mr. Randall is located in Portland, where he is in the employ of the Maine Central on engineering work.

Miss Cora Shaw and Miss Christine Shaw are teaching in the Bluehill Academy, at Bluehill, Me.

Francis G. Wadsworth is Superintendent of Schools at Mexico, Me. Under him in the High School, is Merton T. Goodrich as principal, and Mattie Knight as assistant.

'04.

H. C. Foss, who has located in Sidney N. S., visited on the campus recently.

'09.

Word has been received of the marriage intentions of Dr. Leroy Harvey and Miss Mary A. Hatfield of Kalamazoo, Mich. The wedding will take place on Jan. 19. Dr. Harvey is the oldest son of the late Prof. F. L. Harvey of the Uni-

versity, and at present he has an excellent position as professor of biology in the Western Normal School at Kalamazoo.

'09.

Harry Sutton, who is engaged in the lumber brokerage business in Boston, visited his parents in Orono during the holidays.

Frank Shatney has secured a position as teacher in Higgins Classical Institute at Charleston, Maine.

William M. Black and Miss Ethel M. Carpenter of Windsor, Me., were married in Plainfield, N. J., recently.

There is a pretty little romance connected with Black's marriage, as it was while he was confined in the Waldo County Hospital with injuries received in football, that he met Miss Carpenter, then a nurse at that institution. THE CAMPUS extends its best wishes and congratulations to Mr. and Mrs. Black.

LAW SCHOOL NOTES.

The Winter term at the Law School opened Wednesday, Jan. 5. Among the new students to enter this term are Mr. W. A. Coman, of Pittsfield, Me., and Mr. W. F. Merrill, of Wiscasset, Me., the former registering as a special student and the latter entering the junior class.

Frank P. Wilson, '02, has formed a partnership with V. M. Bovie, New York. The firm has opened offices for the practice of law at 18 Wall street.

The many friends of both parties were pleased to learn of the recent marriage of Charles H. Reid, Jr., and Miss Mary Catherine Gayton, both of Bangor. Mr. Reid is a graduate of the Law School in the class of 1903. He has a very successful practice and is at present recorder of the Bangor Municipal Court.

John Buckley, '07, has opened offices for the general practice of law in Hartford, Conn.

Walter M. Eby, a graduate of Harvard College and Harvard Law School has opened law offices in the New York Life Building, Kansas City, Mo. Mr. Eby will be remembered as an instructor in English at the University of Maine in 1902-3.

CHAPEL TALK BY DR. CROTHERS.

The students had the pleasure last Wednesday of listening to a brief chapel talk by Dr. Samuel M. Crothers of Cambridge, Mass., who has been lecturing in Bangor the past week in connection with the Convocation Week exercises on Religious Life in Literature.

Speaking in an easy, charming manner, Dr. Crothers drew the distinction between a successful and an unsuccessful man, stating that the test for a successful man is what he does when he strikes a hard place. Two paths are then open to him, either to turn back or to fight his way through. How much depends upon the choice!

FACULTY NOTES.

Dr. Fellows has been invited to attend the banquets of both New York and Western Alumni Associations which take place in the near future.

At the monthly meeting of the Faculty of the College of Arts and Sciences on Monday, January 17, Professors Colvin and Stevens spoke on the work of their respective departments, history and physics.

Prof. McKee has arranged a complete card catalogue of all graduates in the chemistry course and he intends to keep in touch with them, in order to facilitate the securing of positions for future graduates.

Dr. Fellows spoke before the local Grange at Turner last Saturday afternoon, on the subject of Industrial Education. He will attend the meeting of the Committee on Industrial Education in Portland on Jan. 27.

Several members of the Faculty and students enjoyed a brief account by Professor Stevens of the meeting of the American Physical Society, held in Boston during the recess, at his home on Tuesday evening, January 11.

Dr. Woods of the Experiment Station addressed the students at chapel Friday on the Pure Food and Drug law and the adulteration of foods. He reviewed briefly the work of Dr. Wiley, chief chemist of the Department of Agriculture, and he spoke of some of the most common practices in the adulteration of foodstuffs and of their danger to health.

LOCALS.

J. M. Eaton, '10, and L. M. Bragg, '10, visited in Stockton Springs, Me., last week.

T. T. Workman, '10, has left college to accept a position with a Bangor printing firm.

Mrs. O. W. Patterson of Castine, Me. visited her son, A. W. Patterson, '12, last week.

L. E. Drew, '11, has left college and has taken a position as draughtsman in Brunswick, Me.

O. F. Sevrens '10, who has been ill for several weeks is up and able again to continue his studies.

On Saturday night of last week the Delta Tau Delta fraternity held an informal house party and dance.

A notice of the bill at the Gaiety will appear each week in the CAMPUS on the last page of reading matter.

D. C. Coombs, '11, represented the Maine chapter of Kappa Sigma fraternity at the Massachusetts State College chapter's banquet last week.

A meeting of the students who intend to teach was called last Thursday, and the twenty odd students who attended listened to brief talks by President Fellows and Prof. Davidson on the value, and often absolute necessity, of work in the department of education in securing positions as teachers. The speakers dwelt on the fact that in many cities instructors will not be engaged unless they have taken courses in education or can pass examinations in them.

COL. VARNUM BEFORE ECONOMICS CLUB.

At the monthly meeting Thursday evening of the newly organized Economics Club, Lieut.-Col. Varnum, professor of military science, gave an informal and very interesting talk on the Indian campaigns in which he took part from 1869 to '76, before that last fatal campaign of Custer and his men.

Col. Varnum, who is a retired officer, had a great deal of experience against the Indians in the Northwest Territory and his reminiscences are so vivid that there is sure to be an even larger attendance of the Club at the next meeting, when he will give an account of Custer's last fight.

CALENDAR.

TUESDAY, JAN. 18.

- 6.30 P. M. Mandolin Club rehearsal, Chapel.
- 7.00 P. M. Banjo Club rehearsal, Chapel.
- 7.30 P. M. Junior Civil Society Meeting, Club-room, Library.

LECTURE BY CHARLES POPE.

Mr. Charles Pope of Manchester, Me., was the speaker at the meeting of the Agricultural Club last Wednesday evening and before a large attendance he talked on the method he uses on his fine dairy farm and on his herd of Jersey cows, in which there are a number that have taken prizes at fairs all over the State.

INTERCOLLEGIATE NOTES.

The Yale Prom Committee has put a ban on the wearing of flowers during Prom week.

Harvard University reports a total enrollment of 6308 an increase of 210 over last year. There are 664 regular freshmen in the college proper.

The Illinois College of Agriculture has completed arrangements for having the several farmer associations hold their annual state meetings at the University during Farmers' Week, January 17-30. A record attendance is anticipated.
